January 21st, 2021

Project Deats

At NotJustCode, we decided to create the most fully featured recording application because we couldn't quite find the perfect recording app to fit all our needs, such as:

- Folders for different recordings, for example, a person could have their grocery list folder, a school folder, a music folder, and so on.
- The ability to search for any recording within a specific folder or throughout the app.
- Speeding up or slowing down a recording when playing it back.
- The option to add more content to a pre-existing recording instead of creating a new one with the same subject matter.
- Being able to cut out or edit parts of the recordings.
- A text to speech feature which transcribes the recording.

So we decided to build an app with all these functionalities, and more.

Introduction

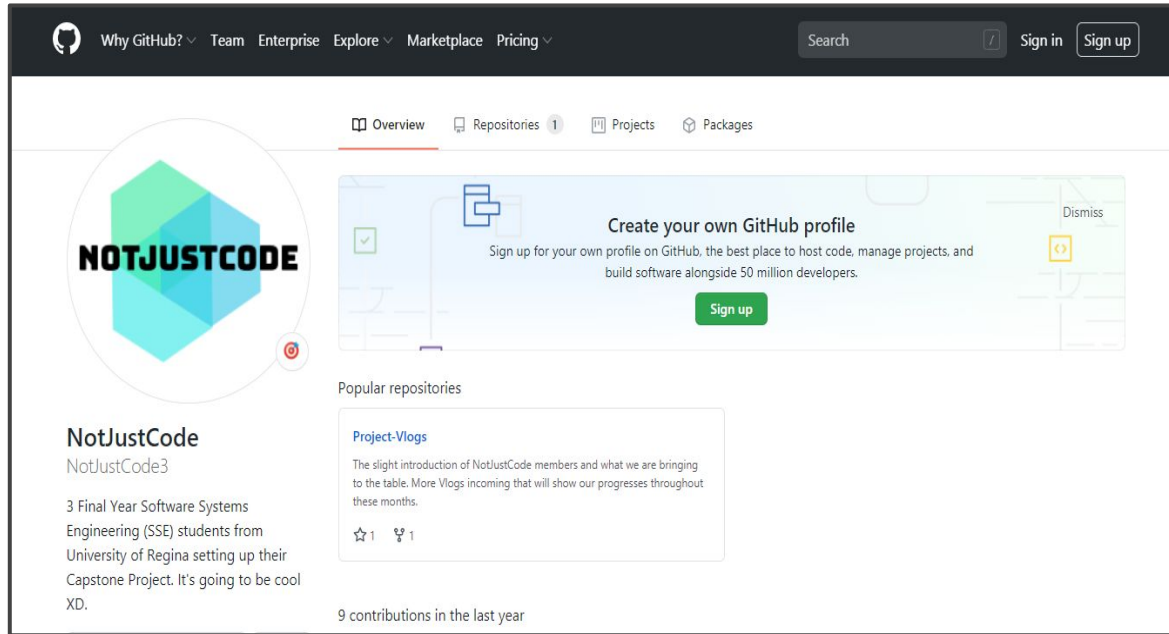

- Git Hub
- Revision Control Setup
- The Complete Flutter Development Bootcamp with Dart
- End of January Road Map

Github

Our Github is still good and up to date.

<https://github.com/NotJustCode3>

The screenshot shows the GitHub profile page for the user 'NotJustCode3'. The header includes navigation links like 'Why GitHub?', 'Team', 'Enterprise', 'Explore', 'Marketplace', and 'Pricing', along with a search bar and 'Sign in'/'Sign up' buttons. The user's profile section on the left features a custom hexagonal avatar with the text 'NOTJUSTCODE' and a bio stating they are '3 Final Year Software Systems Engineering (SSE) students from University of Regina setting up their Capstone Project. It's going to be cool XD.' The main content area has tabs for 'Overview', 'Repositories' (with 1 item), 'Projects', and 'Packages'. A prominent banner encourages creating a GitHub profile. Below this, a 'Popular repositories' section displays the 'Project-Vlogs' repository, which has 1 star and 1 fork. At the bottom, it notes '9 contributions in the last year'.

Revision Control and Planning

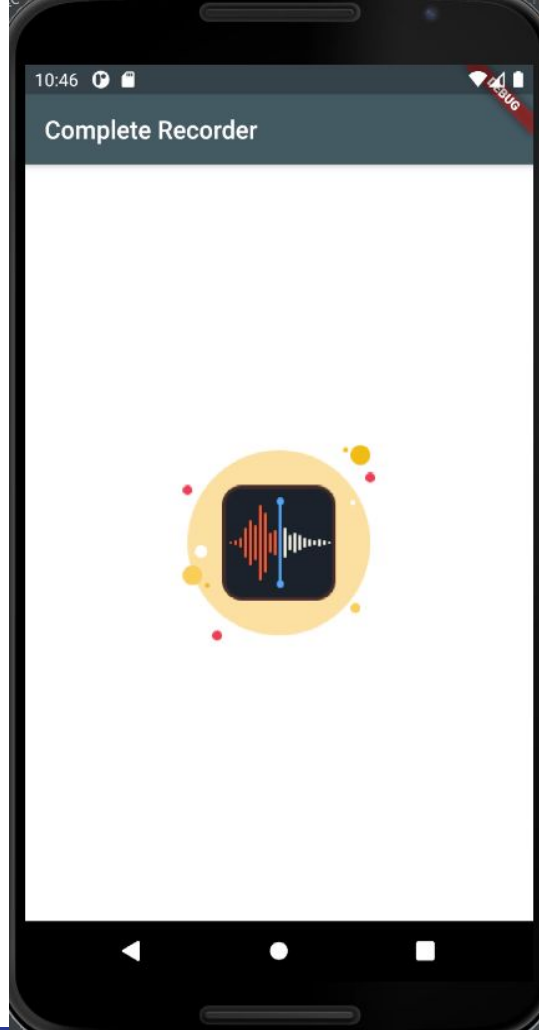

- Branching strategies, and how we would each work on our different branches
 - Feature
 - Develop (once stable, pull into master)
 - Master (stable)
 - Pull requests
 - Reviews
 - Approvals
 - Adding Milestones/ Work Items
 - MVP 1: Complete the recording page, fully functional (end of January to beginning of February)
 - MVP 2: Organizational features - folders and tags (mid-end of February)
 - MVP 3: Search functionality (mid March)
- 

Flutter

- The Complete Flutter Development Bootcamp with Dart

Conclusion

We still have a ways to go, but again we are working really hard, and sorting out our MVPs has really helped us to ease off the overwhelming feeling and just focus on what we have to do.

Any Questions?
