

Things being discussed in this vlog

1. **(Re)Introduce the team and (re)state roles and responsibilities (if they have changed or stayed the same)**

MJ - Product designer

Shafiq - Documentation and Github specialist

Azeezat - Research and DevOps Manager

2. **Briefly restate what your team is doing, the business need and/or the opportunity/innovation that your team's project idea will introduce into the world**

MJ build script, maybe use the same from last time :)

3. **Go over your team's progress, a historical, experiential, and reflective discussion of what your team has and is working on - from project initiating, planning, executing, to closing (NOTE: your team is likely still in the project initiating and planning phases of your project (but maybe not??). To help guide your team's discussion it might be handy/useful to discuss your team's progress from the perspective of Deming's Plan, Do, Study, Act (PDSA) model, discussing activities and knowledge generation that your team has and is experiencing with respect to progress towards the goal of achieving your team's "why" (solution) as a series of PDSAs.**

Shafiq - go through GitHub and what has changed

Azeezat - go through DevOps and the planning tool, plus the research we've done on the platform

4. **(Project Demo - Lo-Fi, Hi-Fi, Coded MVP(s)) - If you have done some project execution, demo what ya got! (keeping in mind your team might still be planning things out at this stage and might not have anything to demo)**

MJ - go through Balsamiq/prototypes

5. **Next up - Discuss your team's plan for the next several weeks with respect to software design and development activities.**

Next week - we will begin the tasks in the next sprint. We have done most of the prototyping so the next up for us will be getting feedback on our prototypes. And then making the decisions for the coding language we want to use and research into tags and how to implement it into our app. And then we hope to begin implement mid November

6. **Team Reflection.**

In the past, we went through the design phase... blah blah blah. Then hand over to colleague to speak on the planning/organization and coordination.

- Does the team feel "on track"?
- What progress does the team particularly feel good (great) about?
- What barriers (if any) does the team feel is a current impediment to success?
- What help (if any) does the team require to move positively forward?

- What questions or concerns does the team have (if any)?

Some of the things that we did

- Talked to stakeholders
- Revamped GitHub
- Created lofi interactive prototype
- Researched cross-platform tools
