# Project Deats

At NotJustCode, we decided to create the most fully featured recording application because we couldn't quite find the perfect recording app to fit all our needs, such as:

- Folders for different recordings, for example, a person could have their grocery list folder, a school folder, a music folder, and so on.
- The ability to search for any recording within a specific folder or throughout the app.
- Speeding up or slowing down a recording when playing it back.
- The option to add more content to a pre-existing recording instead of creating a new one with the same subject matter.
- Being able to cut out or edit parts of the recordings.
- A text to speech feature which transcribes the recording.

So we decided to build an app with all these functionalities, and more.

# Introduction

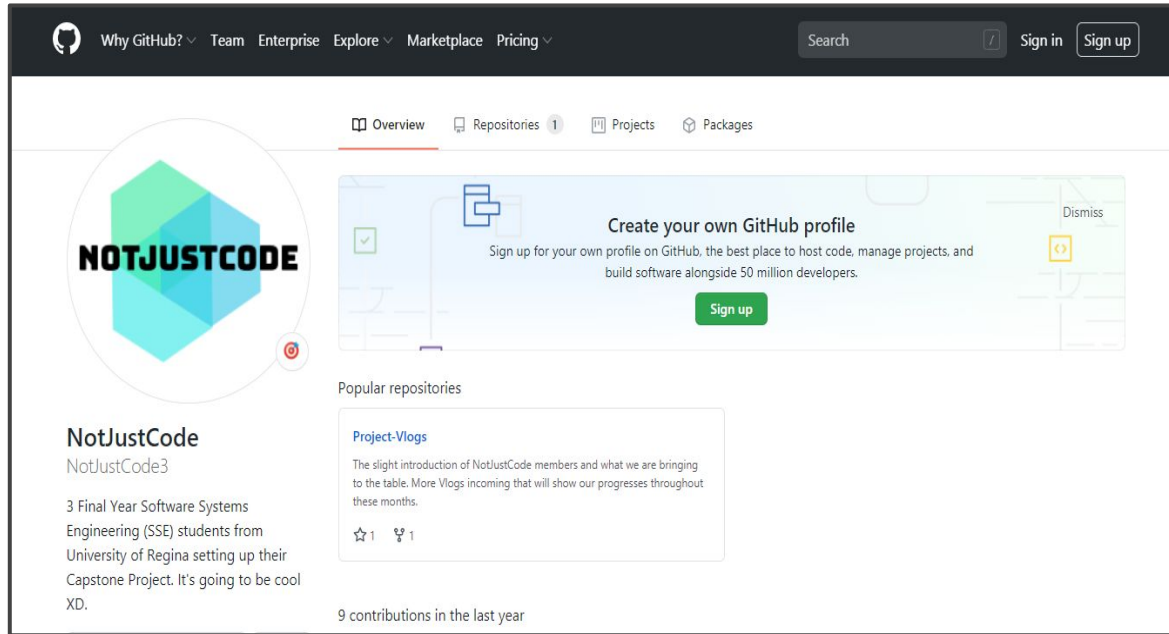

- Git Hub
- Revision Control Setup
- The Complete Flutter Development Bootcamp with Dart

# Github

Our Github is still good and up to date.

<https://github.com/NotJustCode3>

The screenshot shows the GitHub profile page for the user 'NotJustCode3'. The header includes navigation links like 'Why GitHub?', 'Team', 'Enterprise', 'Explore', 'Marketplace', and 'Pricing', along with a search bar and 'Sign in'/'Sign up' buttons. The profile section on the left features a circular avatar with a hexagonal logo and the text 'NOTJUSTCODE', the username 'NotJustCode3', and a bio: '3 Final Year Software Systems Engineering (SSE) students from University of Regina setting up their Capstone Project. It's going to be cool XD.' Below the bio, it states '9 contributions in the last year'. The main content area has tabs for 'Overview', 'Repositories' (with a badge for 1), 'Projects', and 'Packages'. A prominent banner encourages creating a GitHub profile with a 'Sign up' button. Under 'Popular repositories', the first entry is 'Project-Vlogs' with a description and 1 star and 1 fork.

Why GitHub? Team Enterprise Explore Marketplace Pricing Search Sign in Sign up

# Revision Control and Planning

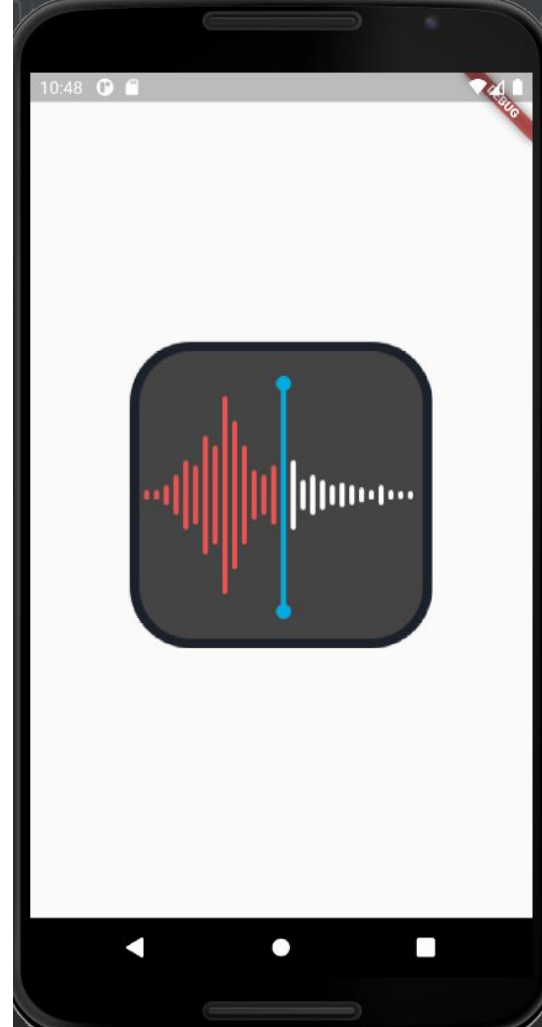

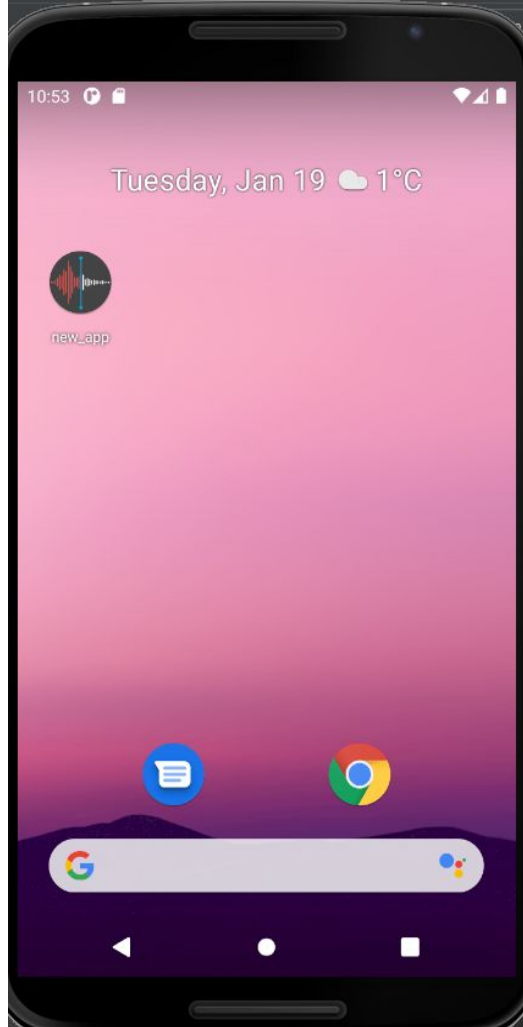

- Branching strategies, and how we would each work on our different branches
  - Feature
  - Develop (once stable, pull into master)
  - Master (stable)
- Pull requests
  - Reviews
  - Approvals
- Adding Milestones/ Work Items
  - MVP 1: Complete the recording page, fully functional
  - MVP 2: Organizational features - folders and tags
  - MVP 3: Search functionality

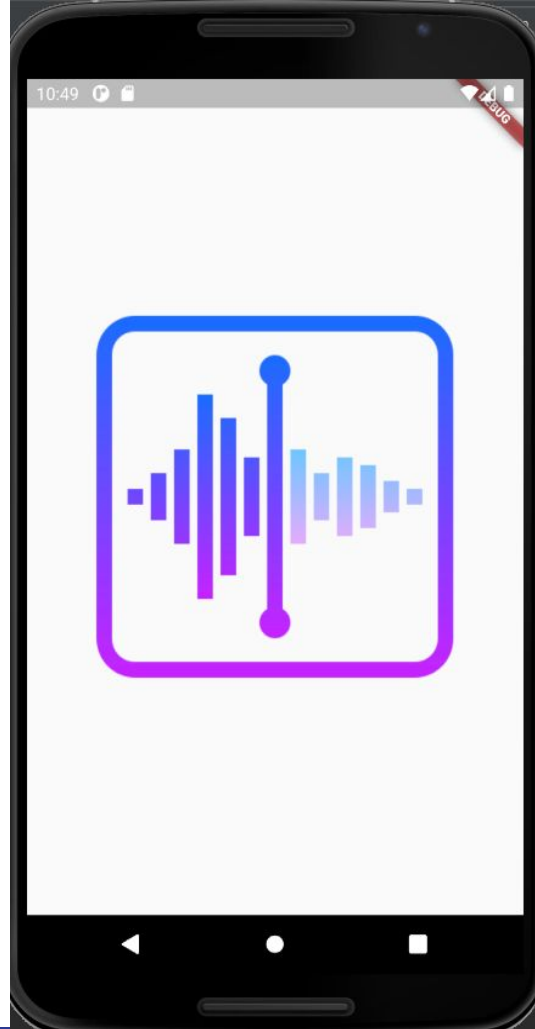

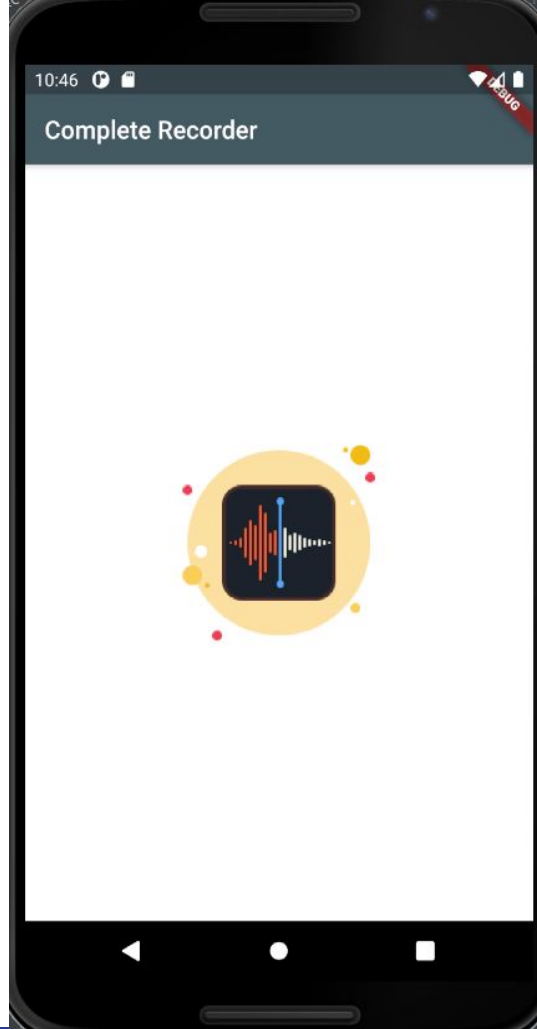

# Flutter

- The Complete Flutter Development Bootcamp with Dart

# Conclusion

We still have a ways to go, but again, we have sorted out our MVPs so as to ease our way into this.
