Project Deats

At NotJustCode, we decided to create the most fully featured recording application because we couldn't quite find the perfect recording app to fit all our needs, such as:

- Folders for different recordings, for example, a person could have their grocery list folder, a school folder, a music folder, and so on.
- The ability to search for any recording within a specific folder or throughout the app.
- Speeding up or slowing down a recording when playing it back.
- The option to add more content to a pre-existing recording instead of creating a new one with the same subject matter.
- Being able to cut out or edit parts of the recordings.
- A text to speech feature which transcribes the recording.

So we decided to build an app with all these functionalities, and more.

Project & documentation review

What are you currently working on?

- We are currently working on our interactive prototype (using Balsamiq), as well as researching cross platform softwares we want to use.

Project Initiation

- We have set up our team sprint planning tool to help us get organized.
- As mentioned, we are creating the prototypes in order to make our implementation easier when we begin that process.
- We have meetings twice a week (more if we need it), to discuss and complete the deliverables.
- Our Github is updated and has all our documentation.

Initial Constraints
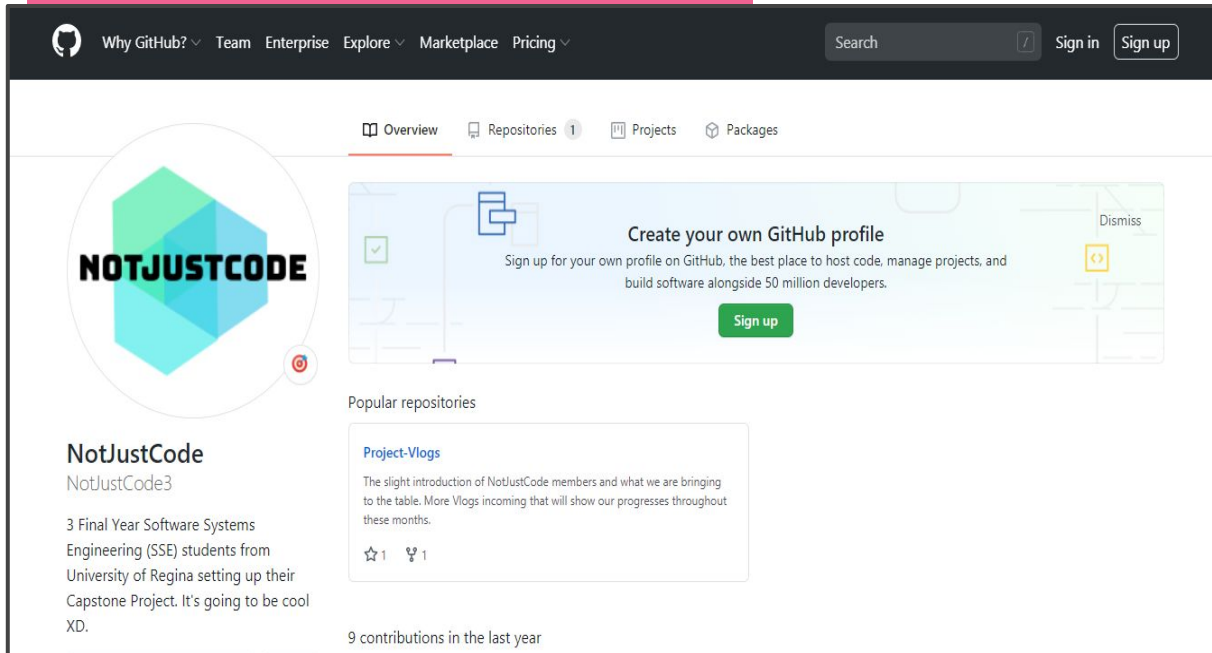

Our constraints are still the same:

- Time & feature constraint
- UI Constraints
- Programming language constraint

Github

Our Github is readable, usable, and we confirm its "goodness". We now have an IO page, and everything is organized.

https://github.com/NotJustCode3

Project Execution

After completing our interactive on balsamiq, we plan to test run it with beta testers. After which, we will begin development in an IDE.

- Xamarin
- React Native
- Flutter

Project demo

- https://balsamiq-wireframes.appspot.com/?state={%22action%22:%22open%22,%22ids%22:[%2218OiKVAJYCp5-e30pR7KCsIzi-BmaWDnI%22],%22userId%22:%22110091217072312009504%22}#

Group reflection

Do you feel you are on track?

- We believe we are still on track.

Do you feel there are barriers to your success (if any)?
- Timing is always a barrier (schedules differences, different task) but as long as we follow our sprint schedule, we will be ok.
- We already have a lot of competitors even before we build our first prototype. There is a little bit of pressure, but we would definitely can work through this.

Group reflection

Do you need any help going forward?

Any other questions or concerns?
- Our team would like to set a time to discuss more about tag and their implementation with you to help drive our design forward.
